

WESTERN RED CEDAR

* * *

SYKES STAR GRADE

A unique approach to Western Red Cedar (*Thuja plicata*) for joinery and claddings.

GRADE: Imported as No 2 Clear only, and re-graded to our own high standard making Sykes Star grade unique for quality and performance.

SEASONING: We air dry to an average of 18% moisture content; this is a natural process using no fossil fuels and is much kinder to the timber. The resulting timber will result in a smoother finish and take coatings or treatments more readily.

FINISHING: Cedar is often left un-finished. However, we can arrange part or full factory finishing if and as required. Flame retardant treatments are also an available option.

DELIVERY: Wrapped, banded and delivered in good condition.
