

WISA®-Pro Facade

Time saving solutions for modern and traditional facades - supplied ready primed and suitable for use in all cladding applications.

Once installed correctly, WISA-Pro Facade has low maintenance costs, long service life and excellent insulation properties.

The wide range of colour options offers a distinctive and practical cladding solution for a wide variety of end uses.

Raw material

Slow grown, sound knotted whitewood, carefully selected from PEFC certified forests and tailor-made for this end use by UPM's own sawmills. The raw material is kiln dried specifically for cladding applications.

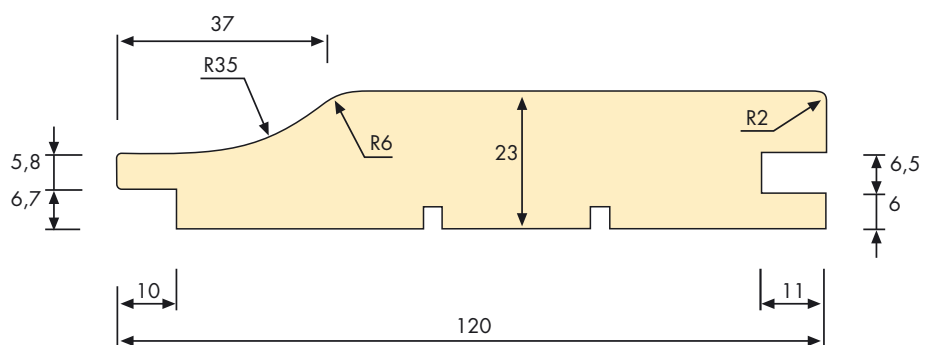

Profiles

Our standard section WISA-Pro Facade is produced with a fine sawn visible surface and has been carefully designed for maximum performance.

WISA-Pro Facade is machined with the naturally more weather-resistant heartwood on the outer face. Sections are end matched to reduce wastage and minimise site fixing.

Standard section

23 x 120 mm overall 110 mm face (cover)

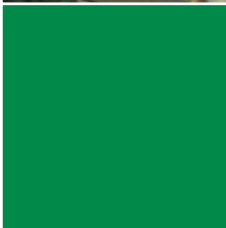

Dimensions and lengths

Standard lengths in 30 cm modules are 4.2 – 4.8 m.

Stock held in prime condition at Atherstone Warwickshire for prompt delivery.

WISA-Pro Facade can also be delivered in finger jointed precise lengths up to 6.0 m.

WISA®-Pro Facade

Standard Surface treatment

Priming oil treatment

WISA-Pro Facade is a specialist outdoor cladding product, treated with an environmentally friendly priming oil based on natural oils. This treatment gives better protection to the wood, acts as an anti-mildew agent and improves the covering capacity of the primer.

Priming

WISA-Pro Facade is primed (white) using water-borne, environmentally friendly alkyd-emulsion paint. This is an ideal preparation for site applied coatings.

WISA-Pro Facade can be finished with a top coat in the illustrated colours or to customers' own colours. For coatings supply and technical information contact Abbott Coatings.

Packaging

WISA-Pro Facade products are delivered in bundles each carefully packed and protected. Samples are available in standard profiles to show the priming and finish quality.
